Claim Rejections - 35 USC § 112

The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Claims 16 and 19 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention. The claims do not clearly set forth that the intended **mixtures** are mixtures of 0 to 25 molar percent of an endcap maleimide with bismaleimides and/or trismaleimides. See page 12, lines 5-10. It is suggested that claim 19 be rewritten to recite "wherein the dienophile is a mixture of 0 to 25 molar percent of an endcap maleimide with bismaleimides and/or trismaleimides".

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

Claims 1-20 are rejected under 35 U.S.C. 103(a) as being unpatentable over Meador et al in the article "Diels-Alder Trapping of Photochemically Generated Dienes with a Bismaleimide: A New Approach to Polyimide Synthesis". Maedor et al disclose polyimides, such as "6a-c" and "7 a-c" in "Scheme 1", having repeating units analogous to the repeating units set forth in the instant claims. The difference is the position of the Ar-C-OH grouping in relation to the phenylene ring structure in the repeating unit. It would have been obvious to one skilled in the art at the time of the invention to provide polyimides having any of the repeating unit structures set forth in the instant claims in view of the disclosure of the Maedor et al article. With respect to claims 1-3 and 8-10, one of ordinary skill in the art

Art Unit: 1711

at the time of the invention would have immediately envisioned the instantly claimed structures obtained by isomers of the aromatic diketone 4a or 4b shown in Scheme 1 of the article. With respect to claims 4-7 and 11-14, It would have been obvious to one skilled in the art at the time of the invention to substitute a diketone compound containing the linking group -ph-X-ph- for the phenylene group in the specifically disclosed diketone because the photoenol moieties produced upon photolysis would have been expected to take part in the same polyimide synthesis scheme as shown in scheme 1.

Double Patenting

The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the "right to exclude" granted by a patent and to prevent possible harassment by multiple assignees. See *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970); and, *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent is shown to be commonly owned with this application. See 37 CFR 1.130(b).

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

Claims 1-20 are rejected under the judicially created doctrine of obviousness-type double patenting as being unpatentable over claims 1-33 of U.S. Patent No. 6,593,389. Although the conflicting claims are not identical, they are not patentably distinct from each other because the instantly claimed polyimides correspond to polyimides derived from the photochemical cyclopolymerization of the aromatic diketones and dienophiles set forth in claim 1 and claimed in US '389. The reason is that the repeating units set forth as (a) through (g) in the instant claims are repeating units that are cyclopolymerization products of aromatic diketones and maleimides set forth in the claims of US '389.

Conclusion

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Susan W Berman whose telephone number is 571 272 1067. The examiner can normally be reached on M-F 9:30-6:00.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, James Seidleck can be reached on 571 272 1078. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.

Information regarding the status of an application may be obtained from the Patent Application
Information Retrieval (PAIR) system. Status information for published applications may be obtained
from either Private PAIR or Public PAIR. Status information for unpublished applications is available
through Private PAIR only. For more information about the PAIR system, see http://pairdirect.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic
Business Center (EBC) at 866-217-9197 (toll-free).
